

ANIMAL WASTE

According to U.S. EPA officials, waste from large factory farms is a serious threat to our nation's waters and drinking water supplies. Thus, new rules are under consideration to control animal waste. The GRRO Tempest Drying System is poised to take full advantage of the market that this will create. The Tempest technology was developed and proven processing cattle manure. It effectively removes the water and produces a usable product.

ENDLESS POSSIBILITIES

The list of materials the GRRO Tempest Drying System can process is practically endless. In addition to biosolids and animal waste, the Tempest Technology can dry coal fines, agricultural wastes, citrus pulp, and muck from dredging operations — virtually anything that needs moisture removed. Contact a GRRO representative to discuss whether the GRRO Tempest Drying System can handle your material.

PROVEN EXPERIENCE

GRRO's staff has unsurpassed experience as environmental specialists, managers, inventors, and professional engineers. The management of GRRO has a long history in the resource recovery industry — including biosolids and biomass. GRRO's mission is to provide solutions for organic treatment and disposition utilizing the best available technologies.
